

Rethinking Backup Power

Finally, there is a generation of smart, automatic home backup power systems. More compact, more energy efficient and more intelligent. A permanently installed Home Generator System by GE is also more affordable and features patented Symphony™ II controls that efficiently manage the energy demands of your entire home.

You don't need a larger generator... just a smarter one.

The average American consumer experiences more than five power outages annually.

Increasingly, people are experiencing major losses due to home power failure. These losses can range anywhere from minor inconveniences to several thousands of dollars. Imagine having to replace a refrigerator or freezer full of food, cleaning a flooded basement caused by a backed-up septic system or even worse.

You really can have it all.

In the past, selecting a home generator system meant choosing between a smaller unit that would only power the barest essentials, or a much larger, more fuel-hungry and costly unit. A Home Generator System by GE with the Symphony™ II Power Management System can provide a true whole-house solution.

Don't Let Its Size Fool You!

Traditional Approach to Backup Power	The New, Smarter Approach to Backup Power
Select a generator that powers a few basic items.	Select a generator that powers your whole house.
Buy a larger, more expensive unit that takes up more space outside your home.	Select a smaller, less expensive, customizable system, that fits nicely within your landscape.
Typical 2 year parts and labor, 3 year limited warranty.	The best comprehensive parts and labor warranty in the industry. 4 or 5 year limited warranty depending on the model.
